

MHT Induction Lighting Saves over \$100,000 per year

Atlanta, Georgia

MHT Lighting was selected by Jones Lang LaSalle to replace 1,400 100W metal halide fixtures for a 846,690 square-foot property they manage. The fixtures were being used 24/7, 365 days a year due to the safety requirements.

MHT's representative in the area, Whitehead Energy Solutions, worked very closely with the management company to provide the right solution. After calculating the ROI and reviewing a number of different options, they ended up selecting MHT's Canopy garage light. To help further the energy savings, they requested occupancy sensory be installed on each light.

The end result; LaSalle believes they will save approximately \$98,000 in energy costs and another \$36,000 in maintenance costs, per year. Over a 10 year period they will save over \$1,300,000 which will result in a very high ROI for Jones Lang LaSalle.

About MHT Lighting

MHT Lighting is the leading manufacturer of energy efficient products in the US. These products include induction and LED lighting and Power management optimization systems. Our high quality products use components from leading companies that have a history of experience, reliability, quality and integrity.

MHT has the only ISO 9000/01 certified Induction light manufacturing facility in the USA. This means every manufacturing procedure and quality system is documented and must be followed by employees. Every product we manufacture has been thoroughly tested, inspected and burned-in to make sure the product will last for the duration we advertise. This is different from 99% of the induction lighting companies on the market!
