

## **Gardner Trucking Selects MHT Lighting's Induction Fixtures**

The owners of Gardner Trucking in Manteca, CA were researching ways to improve security and productivity around their truck yard and parking lot. After considering many options, they decided on MHT Lighting's Induction products. The main reason for this selection was the energy savings, low maintenance and reliability of MHT's fixtures.

Gardner originally started out with 400 watt HPS as their existing light source. This not only did not provide enough light output but they saw consistent issues with having to replace and maintain these lights. After calculating the ROI and working through the numbers, they decided to replace their existing fixtures with MHT 150 watt area lighting. They were extremely impressed with the output they received verses what they had replaced.

## About MHT Lighting

MHT Lighting is the leading manufacturer of energy efficient products in the US. These products include induction and LED lighting and Power management optimization systems. Our high quality products use components from leading companies that have history of experience, reliability, quality and integrity.

MHT has the only ISO 9000/01 certified Induction light manufacturing facility in the USA. This means every manufacturing procedure and quality system is documented and must be followed by employees. Every product we manufacture has been thoroughly tested, inspected and burned-in to make sure the product will last for the duration we advertise. This is different from 99% of the induction lighting companies on the market!
