

MHT Lighting Brightens up Mercedes Benz

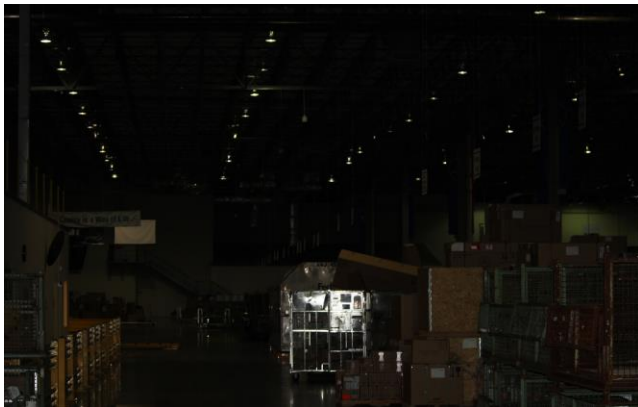

New Jersey

MHT Lighting was selected by Mercedes Benz to replace outdated lighting in one of their warehouses to improve safety and productivity. At the time, the auto maker had about 150 1000 watt high pressure sodium fixtures that were just not getting the job done.

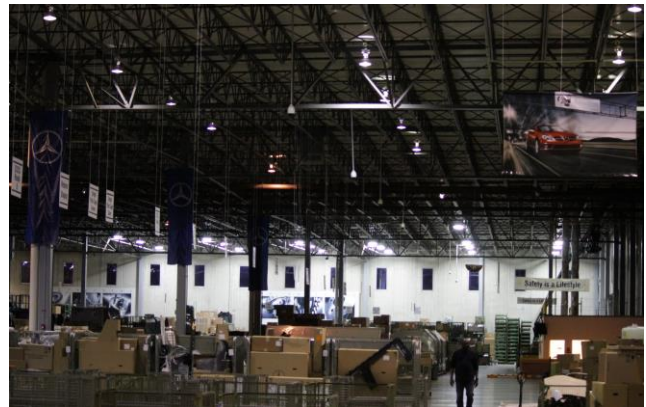

MHT worked closely with our representatives to provide layouts and technical assistance to ensure maximum light output and energy savings was being realized. In the end, Mercedes Benz ended up choosing MHT's 400 watt high bay to replace their current lighting system.

The end result; a safer, more well lit environment for their employees and guests to utilize. In the end, it was a good decision to upgrade their lighting which will save maintenance and, most importantly, money!

About MHT Lighting

MHT Lighting is the leading manufacturer of energy efficient products in the US. These products include induction and LED lighting and Power management optimization systems. Our high quality products use components from leading companies that have a history of experience, reliability, quality and integrity.

MHT has the only ISO 9000/01 certified Induction light manufacturing facility in the USA. This means every manufacturing procedure and quality system is documented and must be followed by employees. Every product we manufacture has been thoroughly tested, inspected and burned-in to make sure the product will last for the duration we advertise. This is different from 99% of the induction lighting companies on the market!
